The CODE System

A TEACHER PERFORMANCE AND MANAGEMENT SYSTEM TO ENSURE FAIR AND MEANINGFUL EVALUATIONS

The CODE System (Comprehensive Online Data Entry) is an interactive data management tool for storing and analyzing teacher evaluations (observations) and/or student teacher data and other school data. CODE is a Web-based system that provides secure access to real-time data and powerful analytical tools for the principal, the evaluator and the teachers.

CODE offers the following features which can be customized to your specific needs:

1. Observations

CODE provides an easy-to-use interface for entering and analyzing teacher observation data. Further, CODE can be used to analyze teacher evaluation data for states or districts using any instructional rubric and to manage higher education clinical evaluation.

2. Reports

CODE generates more than 20 automated reports that can analyze the results of teacher evaluations across grade levels and content areas. These reports identify areas of strength and weakness in your school in order to help design effective professional development. The reports also provide tools for ensuring inter-rater reliability and consistency of evaluators.

3. Performance-Based Compensation Calculations and Teacher Effectiveness Scores (Optional Feature)

For accurate and timely results, CODE can automatically calculate performance-based compensation bonuses or calculate overall teacher effectiveness scores with the specific weightings provided by the school, district or state.

4. Surveys

For easier entry, teachers and principals can fill out any type of survey online (e.g. professional responsibility surveys).
With proven results and leadership in educator quality and reform, the National Institute for Excellence in Teaching’s (NIET) Best Practices Center provides schools, districts and states with **Service, Support and Solutions**—including direct training, data management systems, innovative tools and online resources.

To purchase CODE in your school or district or to schedule a live demonstration:
